

INCREASED STRENGTH AND EXTENDS THE LIFE OF YOUR WINDSHIELD

65% Hydrophobic space age Polymer formula

RVScreenGard chemically bonds to the glass leaving no attachments for contaminants. Once treated, windscreens will repel:

- Rain
- Dirt
- Mud
- Sleet
- Oil

NOT AFFECTED BY DETERGENTS, SAND ABRASION, WIPER AGITATION & OTHER DEBRIS

Protects glass
repels contaminants

65% Increase driver visibility and safety

RVScreenGard is a hydrophobic protective coating that transforms your glass by filling in the peaks and troughs of your windshield.

- Reduces night glare
- Repels water in heavy rain
- Enhances optical clarity
- Improves visual awareness
- Increased driver reaction time

DRIVER SAFETY
SEE MORE AT NIGHT & IN WET WEATHER

Improves visibility
reduces glare

35% Stronger and more durable

RVScreenGard formula molecularly alters the surface of the glass, making it stronger and able to withstand:

- Stone chips
- Hail damage
- Scratching
- Sand pitting
- Abrasion

WITHSTAND MORE ABUSE THAN UNTREATED GLASS

Strengthens glass
minimises damage

99% Protection from harsh Australian elements

RVScreenGard has UV filters that will protect you against UVA and UVB rays, creating an invisible and protective barrier from affects of the sun. Giving you peace of mind and better driving conditions.

FILTERS TO PROTECT FROM UVA & UVB RADIATION

Filters UV
protects interior

5 YEAR WARRANTY ON STONE CHIPS

RVSCREENGARD GIVES YOU YEARS OF SAFER DRIVING FROM THE HARSH AUSTRALIAN ELEMENTS.

INCREASED STRENGTH AND EXTENDS THE LIFE OF YOUR WINDSHIELD

Our formula molecularly alters the surface of the glass, making it stronger and able to withstand more abuse than untreated glass. Using propriety nano-chemistry originally developed for the space program, **RVScreenGard** penetrates deep into the micro crevices of glass, chemically bonding to its surface. **RVScreenGard** creates a molecular bond that seals microscopic surface pores.

How It Works

An untreated windscreen looks completely smooth to the naked eye until viewed under a microscope where you will see it is full of peaks and troughs. When rain, dirt, or debris hit your windscreen, they get caught in these peaks and troughs, which is why they stick to untreated glass.

This is why lights can look blurry or haloed at night because the light is refracting off the debris and contaminants.

Features

RVScreenGard delivers multiply stand out features.

Easy to clean

Will not wash or rub off

Repels rain, dirt, oil and minerals

Reduces night glare improving overall visibility

Improvement in visual awareness improving driver reaction time increasing your safety on the road

Reduces UV rays

Improves visibility in the rain

Enhances optical clarity

Increased scratch resistance to sand pitting, scratching, chips and cracks

Increases wiper blade life

Environmentally friendly
